THE TRUTH ABOUT MIGRATING FROM DYNAMICS GP TO DYNAMICS 365 BUSINESS CENTRAL

MAKING SENSE OF THE CONFUSING DYNAMICS GP CLOUD MIGRATION CONVERSATIONS

As a Dynamics GP customer, you are hearing the importance and advantages of migrating to the cloud. Not all migration conversations are the same. Let us help make sense of your migration options.

SALES@POWERGPONLINE.COM

IMPLEMENTATION VS MIGRATION

First, and most importantly, there is no such thing as a migration from Dynamics GP to Dynamics 365 Business Central. The title of this white paper should be “The truth about implementing Dynamics 365 Business Central from Dynamics GP,” but there are too many partners and competitors spreading misinformation. Wondering why we need to make this distinction early on? Simple, migrations are easy. Implementing Business Central is **NOT** easy.

IMPLEMENTATION

Implementation refers to the process of introducing a new system, process, or infrastructure from scratch. It involves planning, designing, and deploying a new solution to address a specific business need or problem. Implementation can either be a gradual or phased process, depending on the scope and complexity of the change. Simplified, Implementations are hard!

Implementing Dynamics 365 Business Central is not a small job, it is a full transformation of your business systems, integrations, and processes.

In addition to software costs, implementation costs range anywhere from \$50,000 to \$200,000+. The time to implement lasts 6 – 12+ months on average and requires an enormous amount of additional time spent by your team. If there is not a true business reason to implement a new ERP, customers typically do not want to spend the time, effort, or money.

MIGRATION

On the other hand, migration refers to the process of moving an existing system, process, or infrastructure to a new environment. Migration is usually done when there is a need to upgrade or replace outdated systems, or when there is a need to consolidate multiple systems into a single platform.

When considering moving Dynamics GP from your on-premises servers into a hosted cloud like PowerGP Online. It's important to remember you are still using Dynamics GP, keeping all your data and ISVs – it's just hosted in a secure, highly available cloud environment. Unlike an implementation, migrating to PowerGP Online can be accomplished in a matter of days and for as little as a \$2,495 set-up fee!

POWERGP ONLINE IS COMMITTED TO DYNAMICS GP

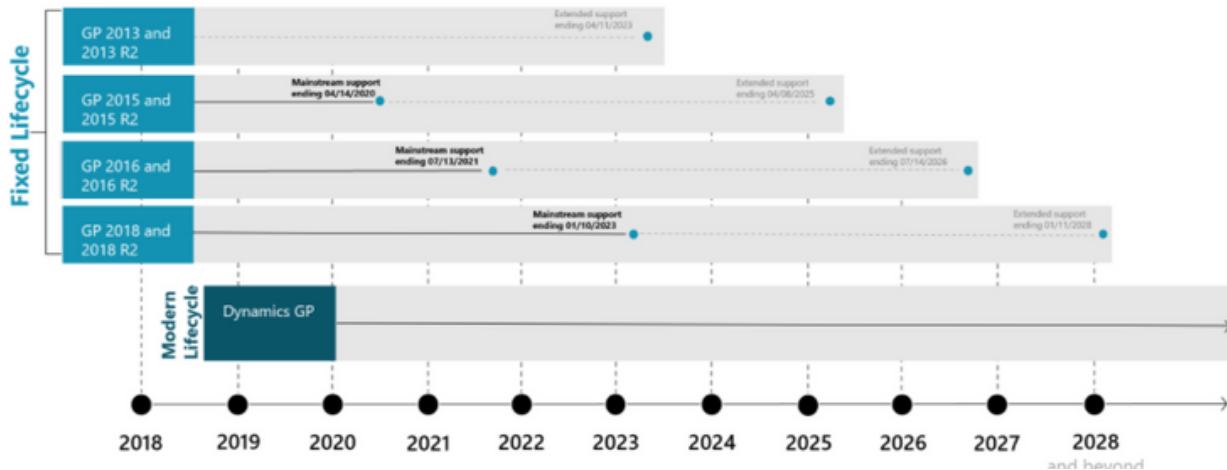

As a Dynamics GP customer, knowing that Microsoft is committed to supporting Dynamics GP to 2028 and beyond, you should be asking, “Do I need business transformation and disruption now?” For most Dynamics GP customers, the answer is “no!” It is important not to feel pressured or bullied by your partner to move to another solution if you are happy with Dynamics GP.

Microsoft has made it clear that they will continue to support existing Dynamics GP customers well into the future whether you are on premise or in the cloud.

We are committed to supporting Dynamics GP well into the future! Products like PowerGP Online allow you to easily migrate your Dynamics GP to the cloud with no expensive costs or time involved.

The Official Microsoft Dynamics GP Roadmap

Dynamics GP versions governed by Fixed and Modern Lifecycle

CLOUD MIGRATION INCLUDES THE POWERGP POWERSUITE

PowerGP Protect

PowerGP Protect is our world class cyber security posture designed from the ground up to keep you and your data safe in the PowerGP Online cloud. You can rest easy at night knowing that our team and our technology is working together to keep the bad guys out of your data.

PowerGP Banking

PowerGP Banking allows you the ability to download transactions from your bank using your online banking credentials. Bank accounts integrate with an easy matching process and credit cards integrate into Accounts Payable. Which makes reconciling your accounts simple, fast and 'red pen' free.

PowerGP Connect

PowerGP Connect is a RESTful API built on top of the eConnect Business Logic Layer of Dynamics GP that provides a modern data integration endpoint capable of both reading from and writing to PowerGP Online from other apps like Excel, Power BI, Power Platform, PopDock and so many more.

PowerGP Import

PowerGP Import is a super simple import tool built right into the Dynamics GP windows. There is no complex data mapping required, you can say goodbye to Integration Manager forever. You have the flexibility to get data where you need it to be and when you need it most!

WE MAKE IT EASY

It is important to remember that you have options when it comes to migrating Dynamics GP to the cloud. Implementing a new ERP should not be one of them unless you are ready to invest the time, effort and pain that comes along with an implementation.

You can still keep Dynamics GP and take advantage of the security and modern features available in cloud with a simple migration to PowerGP Online - The RIGHT Path to the Cloud for Dynamics GP.

Contact us today to see how easy it can be!
